[Notes from Kimball.doc](#)
[3ALowFlowChem.xls](#)
[3AHighFlowChem.xls](#)

These files pertain to the last (low & high flow) tracers. I also have various drafts and perhaps other communications with Briant but I think what I've sent contains most all information. bill

Apologies – Bill you are correct. I thought the gauge was at the bridge. The Colo. Div. of Water Resources describes the gauge as 1,000 feet downstream from the bridge which should be A55. It looks like WQCD took samples there in the early 1990's.

Dan and others, I'm pretty sure Howardsville gauge is A55 which is about ¼ mile below the Little Nation tributary (mine drainage?) which is definitely A54 originating at DM58 –the Little Nation mine.

I'm pretty sure Ken Lieb (USGS) took samples there as well as what is in our database (which includes "most" USGS samples) but it isn't in our data base. I've added the alias descriptor of Howardsville gauge to our database now that you inquired.

I can't tell what the Animas River station name is at the Howardsville gauge. A53? Any help would be appreciated.
